MUDIT PRAKASH MAURYA

SENIOR APPLICATION DEVELOPER

muditpmaurya@gmail.com | linkedin.com | muditmaurya.dev

PROFESSIONAL SUMMARY

Senior DevOps & Cloud Architect with 7+ years of experience designing scalable distributed systems,cloud-native platforms, high-availability architectures, and enterprise-grade automation frameworks. Experienced in AWS, Kubernetes, Microservices, Cost Optimization,Performance Engineering, Query Tuning, Infrastructure-as-Code, CI/CD modernization, service mesh,and large-scale platform reliability. Strong alignment with FAANG engineering principles: automation-first, global scalability, zero-downtime deployments, deep observability, and security-by-design/Security-first-principle.

CORE COMPETENCIES

- **Cloud Architecture**: AWS (EKS, EC2, VPC, Subnets, SGs, ALB/NLB, S3, IAM), OVH Cloud, DigitalOcean
- **Containers & Orchestration**: Kubernetes, EKS, Helm, Istio, Autoscaling, Service Mesh
- **CI/CD Engineering**: GitLab CI, Jenkins, GitHub Actions, Spinnaker, Bitbucket Pipelines
- **Infrastructure-as-Code**: Terraform, Ansible
- **Programming & Automation**: Go, Python, Bash, CLI tooling, API development
- **Observability & Reliability**: Prometheus, Grafana, Thanos, Instana, New Relic
- **Architectural Strengths**: Distributed Systems, Zero-Downtime Deployment, Blue-Green, Security Compliance (CIS/IVA), High Availability, SRE/DevOps Best Practices, DR and backup solutioning.

PROFESSIONAL EXPERIENCE

Sr. Application Developer
Fujitsu (Kering)
Oct 2024 – Current | Noida

- As Team Lead, Led DevOps team in reducing cluster CPU utilization by 65% through workload optimization.
- Architected the migration of all host-based scripts and scheduled jobs to Kubernetes, for fully containerized, fault-tolerant execution.
- Built production-grade automation systems and data-processing pipelines that replaced manual reporting workflows, cutting turnaround time and operational cost significantly.
- Drove end-to-end security modernization by removing embedded credentials and redesigning secrets management using Kubernetes Secrets.
- Designed an efficient, time-aware job scheduling framework ensuring all time-sensitive workloads execute predictably without causing CPU spikes or resource contention.
- As an individual contributor, engineered a network-topology visualization tool that provides real-time visibility into service communication paths, improving traffic control and troubleshooting accuracy.

Sr. Application Developer
Fujitsu (I-ServiceHub)
Feb 2023–Oct 2024 | Pune/Noida

- Built a one-click migration framework enabling seamless, error-free CMO→FMO environment transitions.
- Improved application scalability and reliability by engineering Kubernetes-based deployment.
- Streamlined CI/CD on Kubernetes, enabling zero-downtime releases and significantly faster release cycles.
- Collaborated on-site in Germany to drive architecture reviews, knowledge transfer, and technical review.
- Developed Ansible Tower/AWX automation for multi-machine orchestration and implemented Bitbucket CI/CD pipelines for consistent, scalable delivery.

Sr. DevOps Specialist
Opstree Solutions (Jupiter Money)
Mar 2022–Feb 2023 | Bengaluru

- Architected and implemented Blue-Green deployments on AWS EKS, enabling high-availability and zero-downtime releases.
- Onboarded and configured Thanos to scale observability and deliver long-retention, production-grade monitoring.
- Designed and optimized enterprise CI/CD pipelines using Spinnaker for reliable, automated delivery.
- Led CIS and IVA security compliance implementation, strengthening cluster hardening and operational security posture.
- Implemented high-availability Kubernetes backup and restore workflows using Velero for production-grade DR readiness.
- Architected and onboarded Istio service mesh to enhance traffic control, resilience, and secure service-to-service communication.

Sr. DevOps Specialist
Opstree Solutions (Mobikwik)
Aug 2021–Mar 2022 | Gurugram

- Architected and led the migration of applications from on-premise infrastructure to AWS and Kubernetes, improving scalability and operational resilience.
- Designed and implemented end-to-end monitoring and alerting using PagerDuty, New Relic, and Prometheus, enabling proactive incident response and high-availability operations.
- Led the design and optimization of a new Jenkins-based deployment strategy, automating application lifecycle workflows to significantly reduce deployment turnaround time.
- Developed production-grade Ansible automation for configuration management and application deployments across multi-cluster environments.

DevOps Engineer
Arya Risk (Beacon Media & Konnecttext)
Nov 2019 – Aug 2021 | Pune

- Designed and optimized GitLabCI pipelines to power scalable, multi-service deployments in environment.
- Containerized legacy monoliths into production-grade, microservice-ready components to improve portability and performance.
- Automated SSL provisioning, secrets rotation, and database backup workflows using Python and Bash, improving security and operational reliability.
- Architected a distributed, Python-based backup platform with a centralized controller to orchestrate synchronous database backups, and store encrypted backups in Backblaze—reducing overall backup cost and operational overhead.

Software Developer
First Insight Corp
Jan 2018 – Jul 2019 | Pune

- Architected database versioning workflows to ensure consistent, controlled, and auditable release cycles.
- Developed SQL Server Data Tools (SSDT)–based migration projects for seamless, reliable cross-environment data movement.
- Designed and optimized the DMT tool to achieve significantly higher performance.
- Developed and optimized T-SQL queries, database performance tuning, designed database schemas, and resolved complex database bugs in production systems.

EDUCATION

Bachelor of Engineering (BE), MIT Academy of Engineering, Pune — 2017
